

Disclaimer;

Echo Solutions have conducted extensive mathematical and practical tests, to be able to provide you with an easy to use, easy to install acoustic solution.

There may possibly be mitigating circumstances whereby the solution nominated does not perform as we have calculated.

Hearing is a personal function that is significantly different from person to person. Your interpretation of a space will be different from the next person.

We first ask that you follow the supporting documents, providing you with best practice scenarios, at times the environment may not perform to the general acoustic principles we have applied in offering our solutions.

Purchasing additional materials may have a slightly increased benefit, however, once again there may be circumstances in your environment that exacerbate the reverberating noise, therefore, further support and assistance may be required.

Echo Solutions conducted extensive trials lasting over an 18 month – 2-year period, trials conducted on acoustic performance, adhesive capabilities, quantities of backing plates amongst other trials.

Echo Solutions offers reverberation solutions, trialed on sealed plasterboard walls. Should you have a different surface you would like to adhere to, such as raw or painted brick surface, contact Echo Solutions to discuss what options you may have. Please read our installation guides on how to best manage supplied adhesives and prepare surfaces ready to receive tapes offered.

Please contact Echo Solutions, we would welcome the opportunity to remedy any issues you may be experiencing.

Echo Solutions look towards continuous improvement, and as such, reserve the right to change materials without notification.

Regards,

Echo Solutions Team.
